

Remark®

Office OMR

New features and updates:

- **Data Center** (We have included many changes to the functionality in the Data Center including a new look and feel, new recognition engines, and more)
 - **New barcode reading engine:** To ensure support for the latest barcode features.
 - **Dynamic template updating:** Updated the Data Center to check when open templates are modified in the template editor so that if changes are made the Data Center reflects those changes.
 - **Read grid-in regions right to left:** Added the ability to read grid-in style regions from right to left.
 - **Easily add items to your data when processing forms:** Ability to add a default fill item to your data when scanning and importing images (e.g., a course identifier, session identifier, location, etc.).
 - **New streamlined Review Exceptions screen:** The Review Exceptions screen was updated to allow for easier review and cleaning of your data in the data center.
 - **Speech recognition:** Simplify entering in qualitative data by using your microphone or headset with our new speech recognition engine for entering hand written comments or correcting exceptions.
 - **New sub category of missing values:** Blank and multiple responses are now separate types of missing values so they are easier to distinguish when exporting.
 - **New data exports:**
 - **Microsoft Office 2013 support:** Data can be exported to Microsoft Excel and Access 2013 formats.
 - The 255 column limit and overwrite-only limitations have been removed from the Excel export.
 - Added the **CSV** export format.
 - A numeric data export option was added when using automation files for tabulating surveys.
 - The **ExamSoft®** export format was added for exporting grades into [ExamSoft](#).
 - The **StatPac** export format was added for exporting data into [StatPac](#).
 - Added the ability to save data to [Google Drive](#) and [Dropbox](#).
- **Remark Quick Stats® – analysis & reports** (We have included many changes to the functionality in Remark Quick Stats including a new look and feel, new reports, and more)
 - **General analysis updates**
 - **New streamlined interface for report customization:** Easier interface to customize built-in reports (change headers, fonts, colors, show/hide statistics and more!).
 - **Ability to adjust report labels:** Added the ability to change some of the report labeling options in the Report Properties screen.
 - **Create report groups for task pane:** New report groupings added to the Remark Quick Stats task pane to make finding reports easier. You can also add reports to a Favorites list for easy access.

- **Include Number of Respondents:** You can include the total number of respondents in the survey or test in the report header.
- **Test grading analysis**
 - **Supports for rubrics:** Added a new rubric field type to provide better support for rubric style questions.
 - **Partial credit questions:** Added support for awarding partial credit for test questions.
 - **More robust learning objective support.** You can now apply individual grade scales to each learning objective on a test. You can also add a longer description to the learning objectives.
 - **Support for grading image clips:** You can now award grades when using image clips for hand written responses.
 - **Test version support for Item Analysis Reports:** You can now run Item Analysis reports when using standard multiple answer keys.
 - **Updated the Student Statistics Report:** Added a percent column to the Student Statistics Report in the objective and subjective columns. Also adjusted how extra credit questions appear on the report.
 - **Always exclude answer key in custom gradebook export:** Added the ability to always exclude the answer key when exporting grades to the custom gradebook format.
 - **Class Learning Objectives Report sorting:** When using the sort objectives property in the Class Learning Objectives Report, the overall line is no longer included in the sort.
 - **New test grading reports:**
 - **[Changed Answer Reports \(by student or question\):](#)** Two new reports were added to show any answers that were changed by crossing out responses or making changes to the data grid. The reports are available on the question and student level to provide the most pertinent information to the teacher or administrator.
 - **[Student Response Similarities Report:](#)** A new report was created that shows students with similar responses. You can control the similarity threshold.
 - **[Student Achievement Report:](#)** An Achievement Report was added to show comparisons to the test benchmarks.
 - **[Comparative Item Report for Grading:](#)** A Comparative Item Report was added when grading tests and lists the percent correct for each question based on criteria of your choosing. You can optionally calculate a benchmark using the average percent correct for all students.
 - **CSV gradebook export:** A generic CSV gradebook export was added to enable universal integration with gradebooks and student management systems.
 - **Pinnacle® gradebook:** Added support for [Pinnacle gradebook](#).
 - **Moodle learning platform:** Added support for [Moodle](#).
 - **Canvas learning management system:** Added support for [Canvas](#) by Instructure.
 - **Sakai gradebook:** Added support for [Sakai gradebook](#).

- **Survey analysis**
 - **[Integrated Item Analysis Report](#)**: This report combines our Condensed Item Analysis and Response Reports for easy distribution and viewing of quantitative data and handwritten responses. This is a great report for course evaluations, session evaluations and a variety of other survey projects.
 - **Condensed Item Analysis Report with Statistics**: A new Condensed Item Analysis Report that includes the Standard Deviation and Median statistics.
 - **Basic Item Analysis Report with Statistics**: A new Basic Item Analysis report that includes the Standard Deviation and Median statistics and allows percentages and totals.
- **Template Editor** (We have included several changes to the functionality in the Template Editor to simplify and speed template creation)
 - **Auto numbering of columns and rows**: In an effort to simplify and speed up your template creation process the software attempts to automatically detect the number of columns and rows in the region based on the bubbles it finds.
 - **Enhanced database lookup settings**: Easier access to database lookup settings so that you can create standard templates and share them with other users who might have a different database connection.
- **Form Design** in Word, Excel and other applications that use Windows® fonts.
 - **[New OMR fonts](#)** now install in your Windows font directory when installing Remark Office OMR. Use the new fonts when building forms in applications that use Windows fonts.
 - OMR square font: Squares that contain a single character.
 - OMR rectangle font: Rectangles that contain a single character.
