

# Remark® Testing Solutions

The Remark solutions make grading multiple choice bubble sheets a snap. Use plain paper forms and your own printer to save thousands of dollars on form costs. Or take advantage of the OMR scanner you already own with our easy to use grading software. All of our products produce reports that provide you with student, class and item analysis data for your tests. In addition, you can export data and grades to various formats and gradebooks for analysis.

## Which Product is Right for You?

**Remark Office OMR** is our flagship plain paper scanning program that works with forms you create and print in-house. You can use an image scanner or multi-function printer to scan the forms and then Remark produces grade reports, graphs and charts. This multi-purpose product also reads other form types such as evaluations and surveys.

**Remark Test Grading** is built off of Remark Office OMR's technology, but includes the ability to create custom answer sheets with various answer types and schemas. Enter or import teacher, class, and student information, which is then printed on the test forms. Like Remark Office OMR, you can use an image scanner or multi-function printer to scan the forms and then Remark produces grade reports, graphs and charts. Remark Test Grading is available as locally installed software on Windows computers or as a cloud subscription, giving you access from any web browser and freeing up IT resources.

**Remark Classic OMR** includes all the functionality of Remark Office OMR but works with traditional OMR scanners from Scantron, Apperson, Sekonic, and Chatsworth Data, and pre-printed forms that you purchase or design. Like Remark Office OMR, it has all the reporting to interpret grades and reads other form types such as evaluations and surveys.
