

Remark Office OMR 11.2

New Features and Enhancements

June 2023

★ indicates customer request

Fixes:

- ★ **Change Log Updates:** Changes to the data grid are now recorded in the change log regardless of whether the recovery log is enabled.
Boolean Regions: An issue was fixed where Boolean region labels were reset when updating the column and row properties of the template.
Optimization Update: We fixed an issue where the Changed Answer reports still displayed when software optimization is set to disable response statistic calculations.
- ★ **Point Biserial Calculation with Add Regions:** A problem was fixed where the point biserial calculation was not correct for Add regions.
- ★ **5800 Error Running 104 Student Histogram Report:** A 5800 error was corrected when running the Student Histogram Report with floating correct point values.

Features and Enhancements:

- ★ **Accessibility:** The entire product was reviewed for accessibility and updated accordingly to provide a better experience for users with disabilities.
- ★ **Student Pretest - Posttest Report:** A Student Pretest-Posttest report was added to compare results from a pretest and a posttest.
- ★ **Student Achievement Report:** You no longer have to set up a benchmark to run the Student Achievement Report. Ensure that the "Include Students" property is set to "All Students" if you are not using a benchmark.
- ★ **Customizing Report Labels:** The ability to customize the "Learning Objectives" and "Description" labels was added to the 111 - Class Learning Objectives Report.
- ★ **Copy and Paste for Partial Credit:** You can now copy and paste in the grid used to set up partial credit in an answer key.
- ★ **Report Style Properties:** For any report style property that allows you to edit the text (e.g. Footer text) you will now see a pencil you can click to edit the default text.
- ★ **Schema Names:** We added the schema name when using SQL Server and ODBC connections. You will now see the schema name pre-pended to the table name when using Database Lookup, opening data, saving data and appending data to existing files.
- ★ **Cronbach Alpha Update:** Report preferences were added to the 100 - Test Analysis Report so that you can change the scale item names and ranges used for the Cronbach Alpha score.
- ★ **Reviewed Exception Type:** An exception type was added for "Reviewed" cells to let you know which cells had already been reviewed while using Review Exceptions.
- ★ **Read from Folder:** You can now read an entire folder's worth of images when processing your form. Use the "Add Folder" button in the Read window to select a folder. You can also filter the image type so that Remark only looks for specific images.
- ★ **Image Base Names:** When using the Package and Rename feature you can now add a field called [Image Name] that allows you to use the original image file name in the new name of the packaged image.
